We are here to make your data visual.

KoolChart is a leading innovator and publisher of Data Visualization solutions for the connected world. We believe our HTML5 components, KoolChart, KoolGrid and KoolMap are the perfect combination for your data visualization projects in Desktop and Mobile environments.

Our HTML5 Components are Just Cool
- Kool-series software are a single framework for data visualization.
- Easy-of-use and stability to developers and intuitive data analysis to users.

WEB standards-based software components
Compatible with all kinds of web browsers
Compatible with all kinds of mobile platforms
Running on all kinds of server OS
No restrictions on server programming languages

How to buy?
- http://www.koolchart.com/buy
- Domain-based license – validates the server name or IP address within the URL.

KoolCharts for HTML5
- System Configuration
- Server
  - Running on all kinds of server OS and web server software
  - No restrictions on server programming languages
- Data Transmission
  - XML, Array, JSON, HTML Table, CSV (String or URL)

Client
Compatible with all kinds of mobile platforms and web browsers
Powerful features built on HTML5 Canvas

Various chart types and pre-packaged samples

- 29 essential chart types, which is the most numerous provided in a single package.
- 300 ready-to-use samples are pre-packaged.
- Brilliant 2D and 3D charts with animation effects.

29 essential chart types
10 basic types, 19 advanced types, 100+ sub types

Cross-browser and multiple devices

- All HTML5-supported browsers
- Use on multiple devices with a single development.

Industry standard-based development platform for data visualization

- A robust charting solution written using industry-standard HTML5 for structured and unstructured data.
- Customizing services available

The main features of KoolChart

- HTML5 Canvas-based charting solution with better performance over SVG-based solutions.
- Separating Layout and Dataset can enhance productivity and quality.
- Powerful user-defined functions and detail features are our key differentiators.
- TTS (Text-to-Speech) and patterns for visually impaired users are supported.
Robust DataGrid component built on JavaScript and CSS3

Diverse and powerful features

- Many useful features are provided including sort, move, merge, filter, search, hierarchical view, auto sum, selective control, renderers, context menu, data interface between components, etc.

Convenient interface for WEB

- Excel-style user interface allows developers to build powerful WEB interfaces quickly and with little coding.

For many applications which need presenting tabular data to Desktop and Mobile users.

- Build your applications using a tool based on the industry-standard HTML5/CSS/JavaScript technology.

Excellent compatibility

- Loading a DataGrid instantly without installing any software on your machine.
- Single application for all users, regardless of operating system, hardware, or network.
- Compatible with Desktop and Mobile devices. Reduced development costs.
- As KoolGrid is based on the industry-standard languages, such as XML, JSON and CSV, you don’t have to depend on a server-side language like ASP, PHP, JAVA or .Net.

Development efficiency and quality

- Having no direct access to Database System, any data source can be used.
- XML, JSON and JavaScript are common to most web developers.
- Separating Layout and Dataset can enhance the reusability and the cooperation between developers and designers.
All-round interactive map component

KoolMap provides maps (World, Canada, China, Japan, U.S., UK, Korea, etc.) that users can interact with location data. You can use KoolMap in various applications other than geographic maps, such as theatre seating, airplane seating, building map, etc., and you can also create custom maps using Adobe Illustrator (AI).

KoolMap is a software component that visualizes data with interactive maps.

Building rich visual interfaces using mouse events, tooltips, objects on/off, search depth, etc.

KoolMap for HTML5

Interface between Map and Data

The main features of KoolMap

- Highlighting location on the map, displaying panel and image on certain locations of the map, coloring areas and legend by interacting with data, creating a spark chart on the map, drilling down to sub-maps and mouse events are supported.

KoolMap HTML5 Samples

- Bubble Series
- Image Series
- Panel Series
- Multiple Plot Series
- Charts on Map
- Multiple Colors
- Route Series

Drill down to sub-maps: World, World Continents, U.S., Japan, China
